

NewStart AI — Government Document Routing (Demo)

Research Results Historical Random Form Demo Family-Aware Robustness Demo

Saved frozen evaluation replay — Version 6 family-aware robustness study (Checkpoint 10). Every prediction below was already computed and saved to disk; this page never calls Gemini, never recomputes an embedding, and never re-runs BERT. Samples only from the 99-document family-disjoint frozen test set, a dataset entirely separate from the historical demo above.

Condition: Random condition ▼

Random Family-Aware Document

Routing method for guidance:

Family-aware BERT ▼

Document 542

Effective family: **IRS:W4V** | Ground truth: **IRS** | Condition: **complete_unmasked** (unmasked, complete)

Source: saved_frozen_evaluation

withhold federal income tax from any of the government payments code. Don't abbreviate the country name

Per-condition comparison

complete_unmasked

unmasked

Fingerprint: ab5ffbae471aedca...

All methods use the same registered source condition. BERT processes the complete text using its frozen chunking and document-level aggregation policy, while both Gemini methods receive the same main query text under the frozen 6,000-character limit. LLM+RAG additionally receives approved retrieved context.

Method	Status	Predicted	Correct	BERT prob.	Retrieval sim.	Latency (ms)	Routed guidance
